About Me

My career so far has allowed me to work in different software roles (test, development, management) in identity and access management, in healthcare as well as in legal document discovery. Even in management roles, I never shied away from hands-on work and has always been keen keeping my technical skills relevant. I am a true believer in transformational leadership and work hard to create an atmosphere where engineers can strive and prosper. Building a trusting relationship with the team is critical to my success. Open, honest, regular communication is my way of making this happen. I help out where I can even if the task at hand is not in my job description. I enjoy getting things done, greasing the wheels of the organization with a laser focus on delivering value.

Skills

Quality assurance & software testing

Manual and automated testing

Engineering management & leadership

Software Development

Java, C, go, JavaScript

Agile Methodologies

Cloud Services

Amazon Web Services, Azure, Google Cloud

Professional Experience

12/2021 – present
Austin, TX, USA

Principal Quality Engineer

Verosint

- Reduced feedback loop by implementing automated static code analysis as well as API-based integration tests using Go as well as Postman
- Managed the tool selection and roll-out of automated end-to-end tests for React based application
- Developed code quality rules in collaboration with team
- Coached developers on quality practices and techniques
- Built foundation for software development lifecycle process

05/2019 – 12/2021
Boston, MA, USA

Software Quality Manager

mabl

- Pushed the product engineering team to embrace and adopt modern testing methodology emphasizing quality driven by customer data and resulting in acceleration of delivering business value to end-users
- Performed hands-on software testing of mabl's SaaS product delivered on Google Cloud Services
- Introduced exploratory testing sessions as a regular practice which are now independently conducted by all teams

- Revitalized The Ministry of Testing Boston Meetup group by finding speakers, setting up, organizing, advertising a handful of meetups since November 2019 both onsite at the mabl office and online
- Updated and maintained internal end-to-end testing framework using the dogfooding technique
- Provided daily and weekly reports on software quality using cloud monitoring, tracing, data analysis tools such as Google BigQuery, Google Data Studio, Google Error Reporting, Rollbar, FullStory
- Working across the organization, introduced and implemented a unified process, evaluated and selected a tool for issue tracking. Implemented issue tracking solution using Atlassian Jira including with custom workflows, fields, dashboards as well as automated processes using Groovy
- Implemented new CircleCI (bash), Octopus Deploy (PowerShell), updated Jenkins (Java) integrations
- Rewrote existing Selenium-based Java tests to use BDD-style JavaScript framework with CodeceptJS and webdriverio
- Helped a major enterprise client - Splunk - by updating unattended, failing tests and helping them to learn best practices on test automation leading to the highest dollar value annual renewal in company's history
- Contributed to the product with minor bug fixes typically found while reviewing Google Error reports using Java and JavaScript

08/2018 – 04/2019
Austin, TX, USA

Director of Software Quality

CS DISCO

- Contributed continuous improvements to company's risk-based quality assurance processes such as risk assessment, risk monitoring and risk grading on the entire product portfolio
- Monitored and analyzed escaped product defects for root cause and bug cluster analysis
- Implemented test data strategy to mitigate risk of escaped product defects due to insufficient breadth of testing
- Improved hiring practices for quality assurance engineers by formalizing interview scripts
- Drove cross-cutting projects within engineering – such as test automation framework enhancements, selection of next-generation test automation tools – with collaboration from each and every product team
- Set up knowledge sharing lunch n' learn sessions to effectively share and disseminate information. Coordinated and improved cross-team communication of testing activities.

04/2017 – 08/2018
Austin, TX, USA

Director of Quality

ESO Solutions

- Managed a quality assurance team of 10 engineers in a matrix engineering organization following Agile practices (Scrum & Kanban) with employees in Austin, TX and Des Moines, IA. Hired QA engineers using recruiters and internal referrals. Mentored junior QA engineers on testing practices and test automation best practices. Introduced an engineering internship program. Successfully transitioned some QA engineers to more suitable roles in support and development. Provided continuous feedback to engineers during weekly one-on-one meetings.
- Implemented additional quality processes such as code reviews between QA and development engineers, created test plan templates (master, user story), and introduced session-based testing prior to product releases with participation from non-engineering staff (customer support, training, professional services)
- Introduced test case management to capture both manual as well as automated test cases and to track their execution

- Evaluated and introduced a cloud-based test automation service (SauceLabs)
- Presented testing practices at the Test Leadership Congress in New York City (June 2018)

08/2012 – 04/2017
Austin, TX, USA

Product Quality Manager

Ping Identity / UnboundID

- Managed a team of six QA engineers (based in Austin, TX and other US locations). Hired QA engineers through recruiters, internship programs and recruitment at local meetups. Managed out underperforming engineers in a humane and respectful manner. Facilitated career advancement of QA engineers in both testing and non-testing roles. Provided continuous feedback to engineers during weekly one-on-one meetings and 360-degree feedback during annual reviews.
- Implemented additional quality processes such as coverage of patch releases, enabling code quality tracking with SonarQube, requiring code reviews by QA engineers for all product changes. Ensured a high level of automation at multiple testing levels (unit, functional, system as well as performance) against a complex product suite.
- Introduced new tools and services to improve engineering productivity such as: improving integration between source control, code review and issue tracking systems, switching to Slack as the primary team communication with integration of key engineering services and pushing the company to move from on-premise to hosted services (e.g. moving from on-premise data center to Amazon AWS, leveraging hosted source control for new projects).
- Managed engineering lab infrastructure, systems, and tools

08/2008 – 08/2012
Austin, TX, USA

Software Engineer

UnboundID

- First person to receive job offer from UnboundID with 4 co-founders. Worked as a backend developer of a Java-based high-scale identity management product suite deployed across data centers in environments with millions of users and memory usage often exceeding 100 GB.
- Developed and enhanced the replication feature to keep data in sync between product instances with extreme high-scale, high-throughput and low-latency requirements. Introduced WAN-friendly feature to significantly reduce cross-site traffic.
- Performed work duties for the first year as a remote employee

07/2001 – 08/2008
Austin, TX, USA

Staff Engineer (Software)

Sun Microsystems

- Developed an extranet-focused, high-scale identity management J2EE application (Identity Manager Service Provider Edition). Designed and developed LDAP connector including a novel state-based change detection technique.
- Prototyped and later integrated (a now patented) on-demand password synchronization between Active Directory and iPlanet Directory Server.

05/2000 – 06/2001
Grenoble, France

Quality Assurance Engineer

Sun Microsystems France SA

- Designed and developed automated tests for security and replication features of the iPlanet Directory Server. Developed stress and scale tests to exercise product limits.
- QA recipient of the "Good Enough Never Is" award.

09/1997 – 05/2000
Budapest, Hungary

Research Assistant

Computer Research and Automation Institute of the Hungarian Academy of Sciences

- Developed model for web proxy caches using colored Petri net and presented paper at a workshop in Aarhus, Denmark

- Managed web proxy cache service consisting of 50+ systems in the higher educational network
- Provided pre-sales support for middleware applications from Process Software, Inc. and Innosoft International, Inc
- Beta tested e-mail messaging and directory products. Numerous bug reports led to job offer from Innosoft (acquired by Sun Microsystems)

Education

09/1992 – 05/1997
Veszprem, Hungary

Master of Science in Information Technology
University of Veszprem

Courses

09/2017 – 05/2018
Austin, TX, USA

Bluecase Vision 2 Innovate Leadership Training
Bluecase
The V2I Process is a synthesis of some of the world's most effective high performance and leadership tools and practices. The four courses are delivered over four calendar quarters, and include practical processes for day-to-day application throughout the year. Select one-on-one coaching participants learn how to lead the cultural development effort, bringing the tools more deeply into the organization to ensure the skill sets are understood and practiced.

09/2016 – 12/2016
Austin, TX, USA

Austin Agile U Foundation Level Class
Agile Austin
The Agile Austin U Foundations Course is a 9-week course on Wednesday evenings. The intent is to introduce the core concepts of Agile, with an emphasis on Scrum.

Certificates

International Software Testing Qualifications Board (ISTQB)
Foundation Level Certified Tester,
Foundation Level Agile Tester,
Advanced Level Test Manager

Association of Software Testing
 BBST Foundations

Languages

- Hungarian
- German
